INTRODUCTION

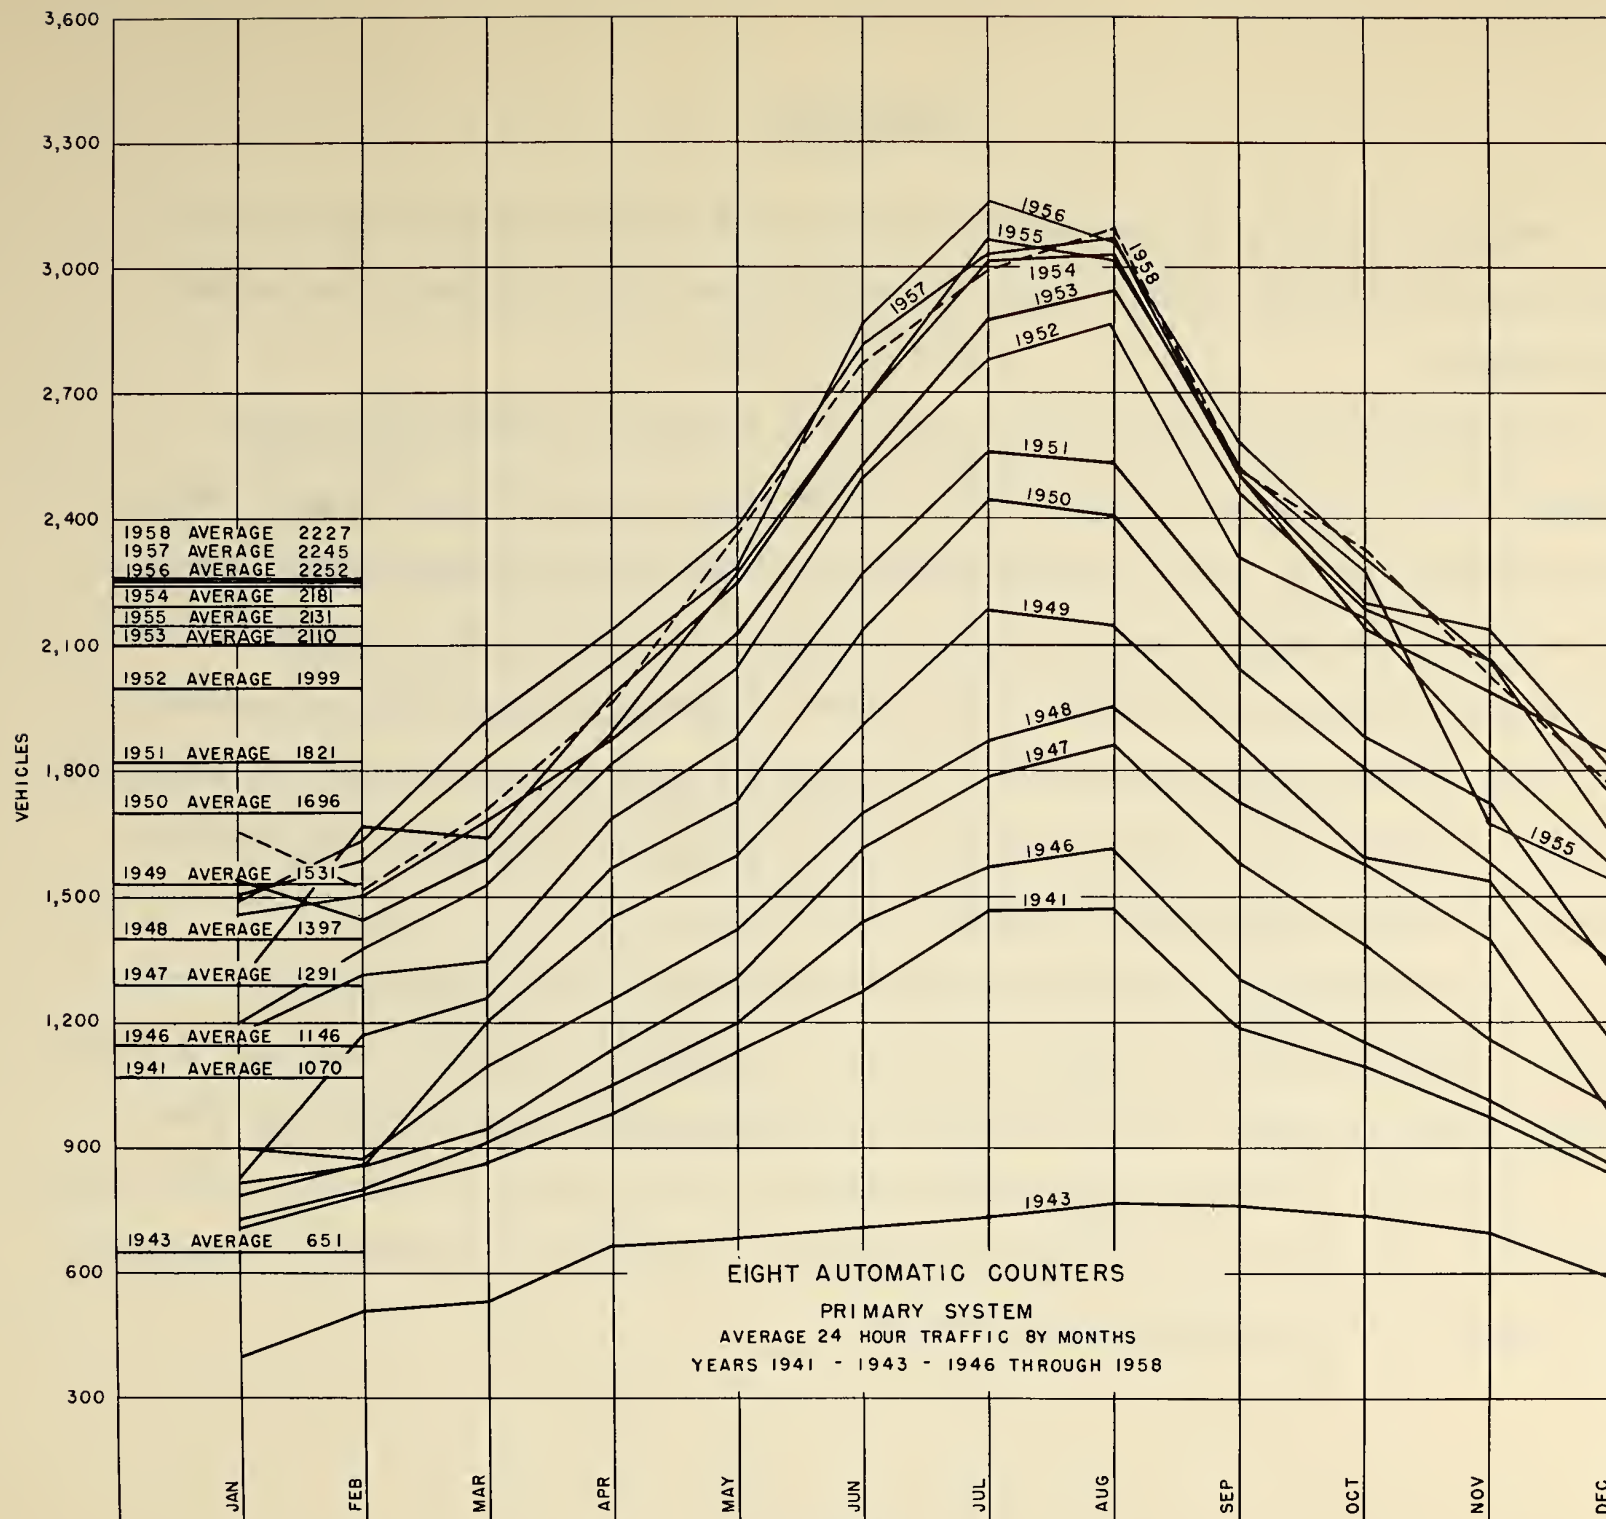

Montana's accelerated construction program during the past few years has increased the demand for reliable traffic figures in useable form on all sections of the Federal Aid systems.

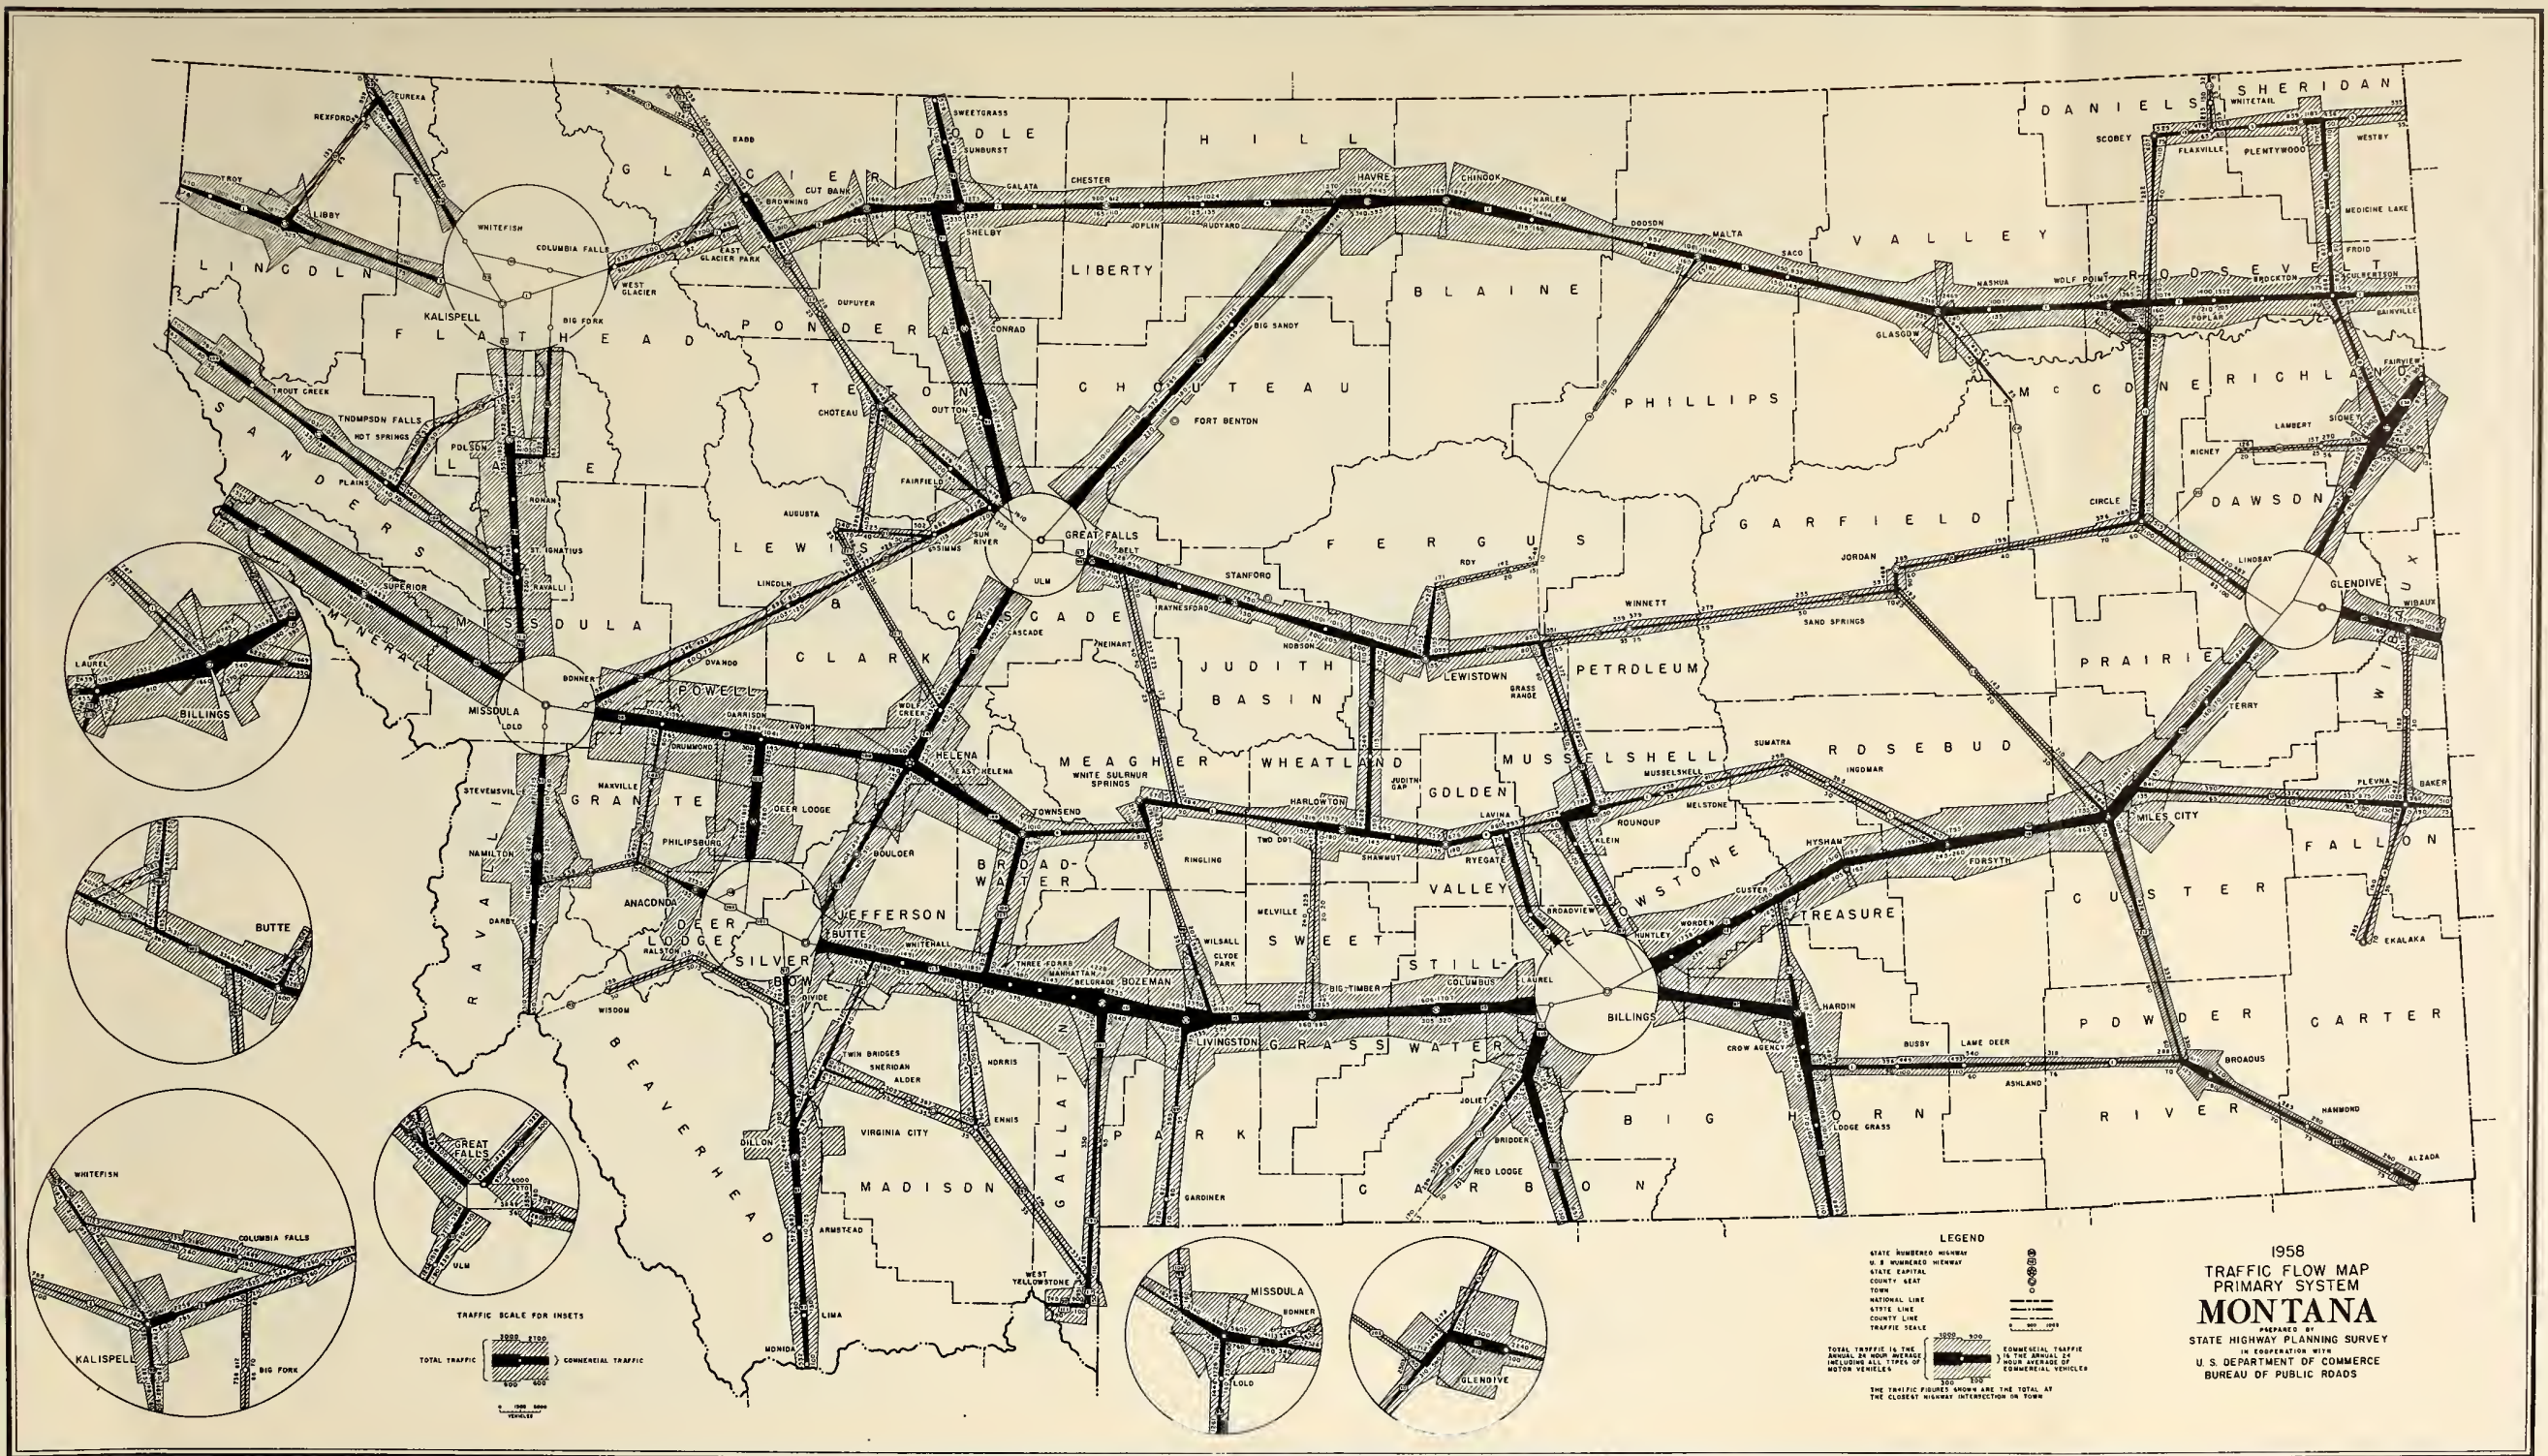

The 1958 Traffic by Section report contains a listing of average daily traffic figures for the years 1954 through 1958 by federal aid route number on both the primary and secondary systems. Each route is conveniently broken into sections between incorporated city limits, county lines and major road junctions. Traffic on the primary system is further broken down into average daily volumes of foreign passenger cars and commercial vehicles. Traffic volumes are counted at about 2000 locations on the primary and secondary systems. Classification data are obtained from approximately 150 manual count stations located at major road junctions throughout the state.

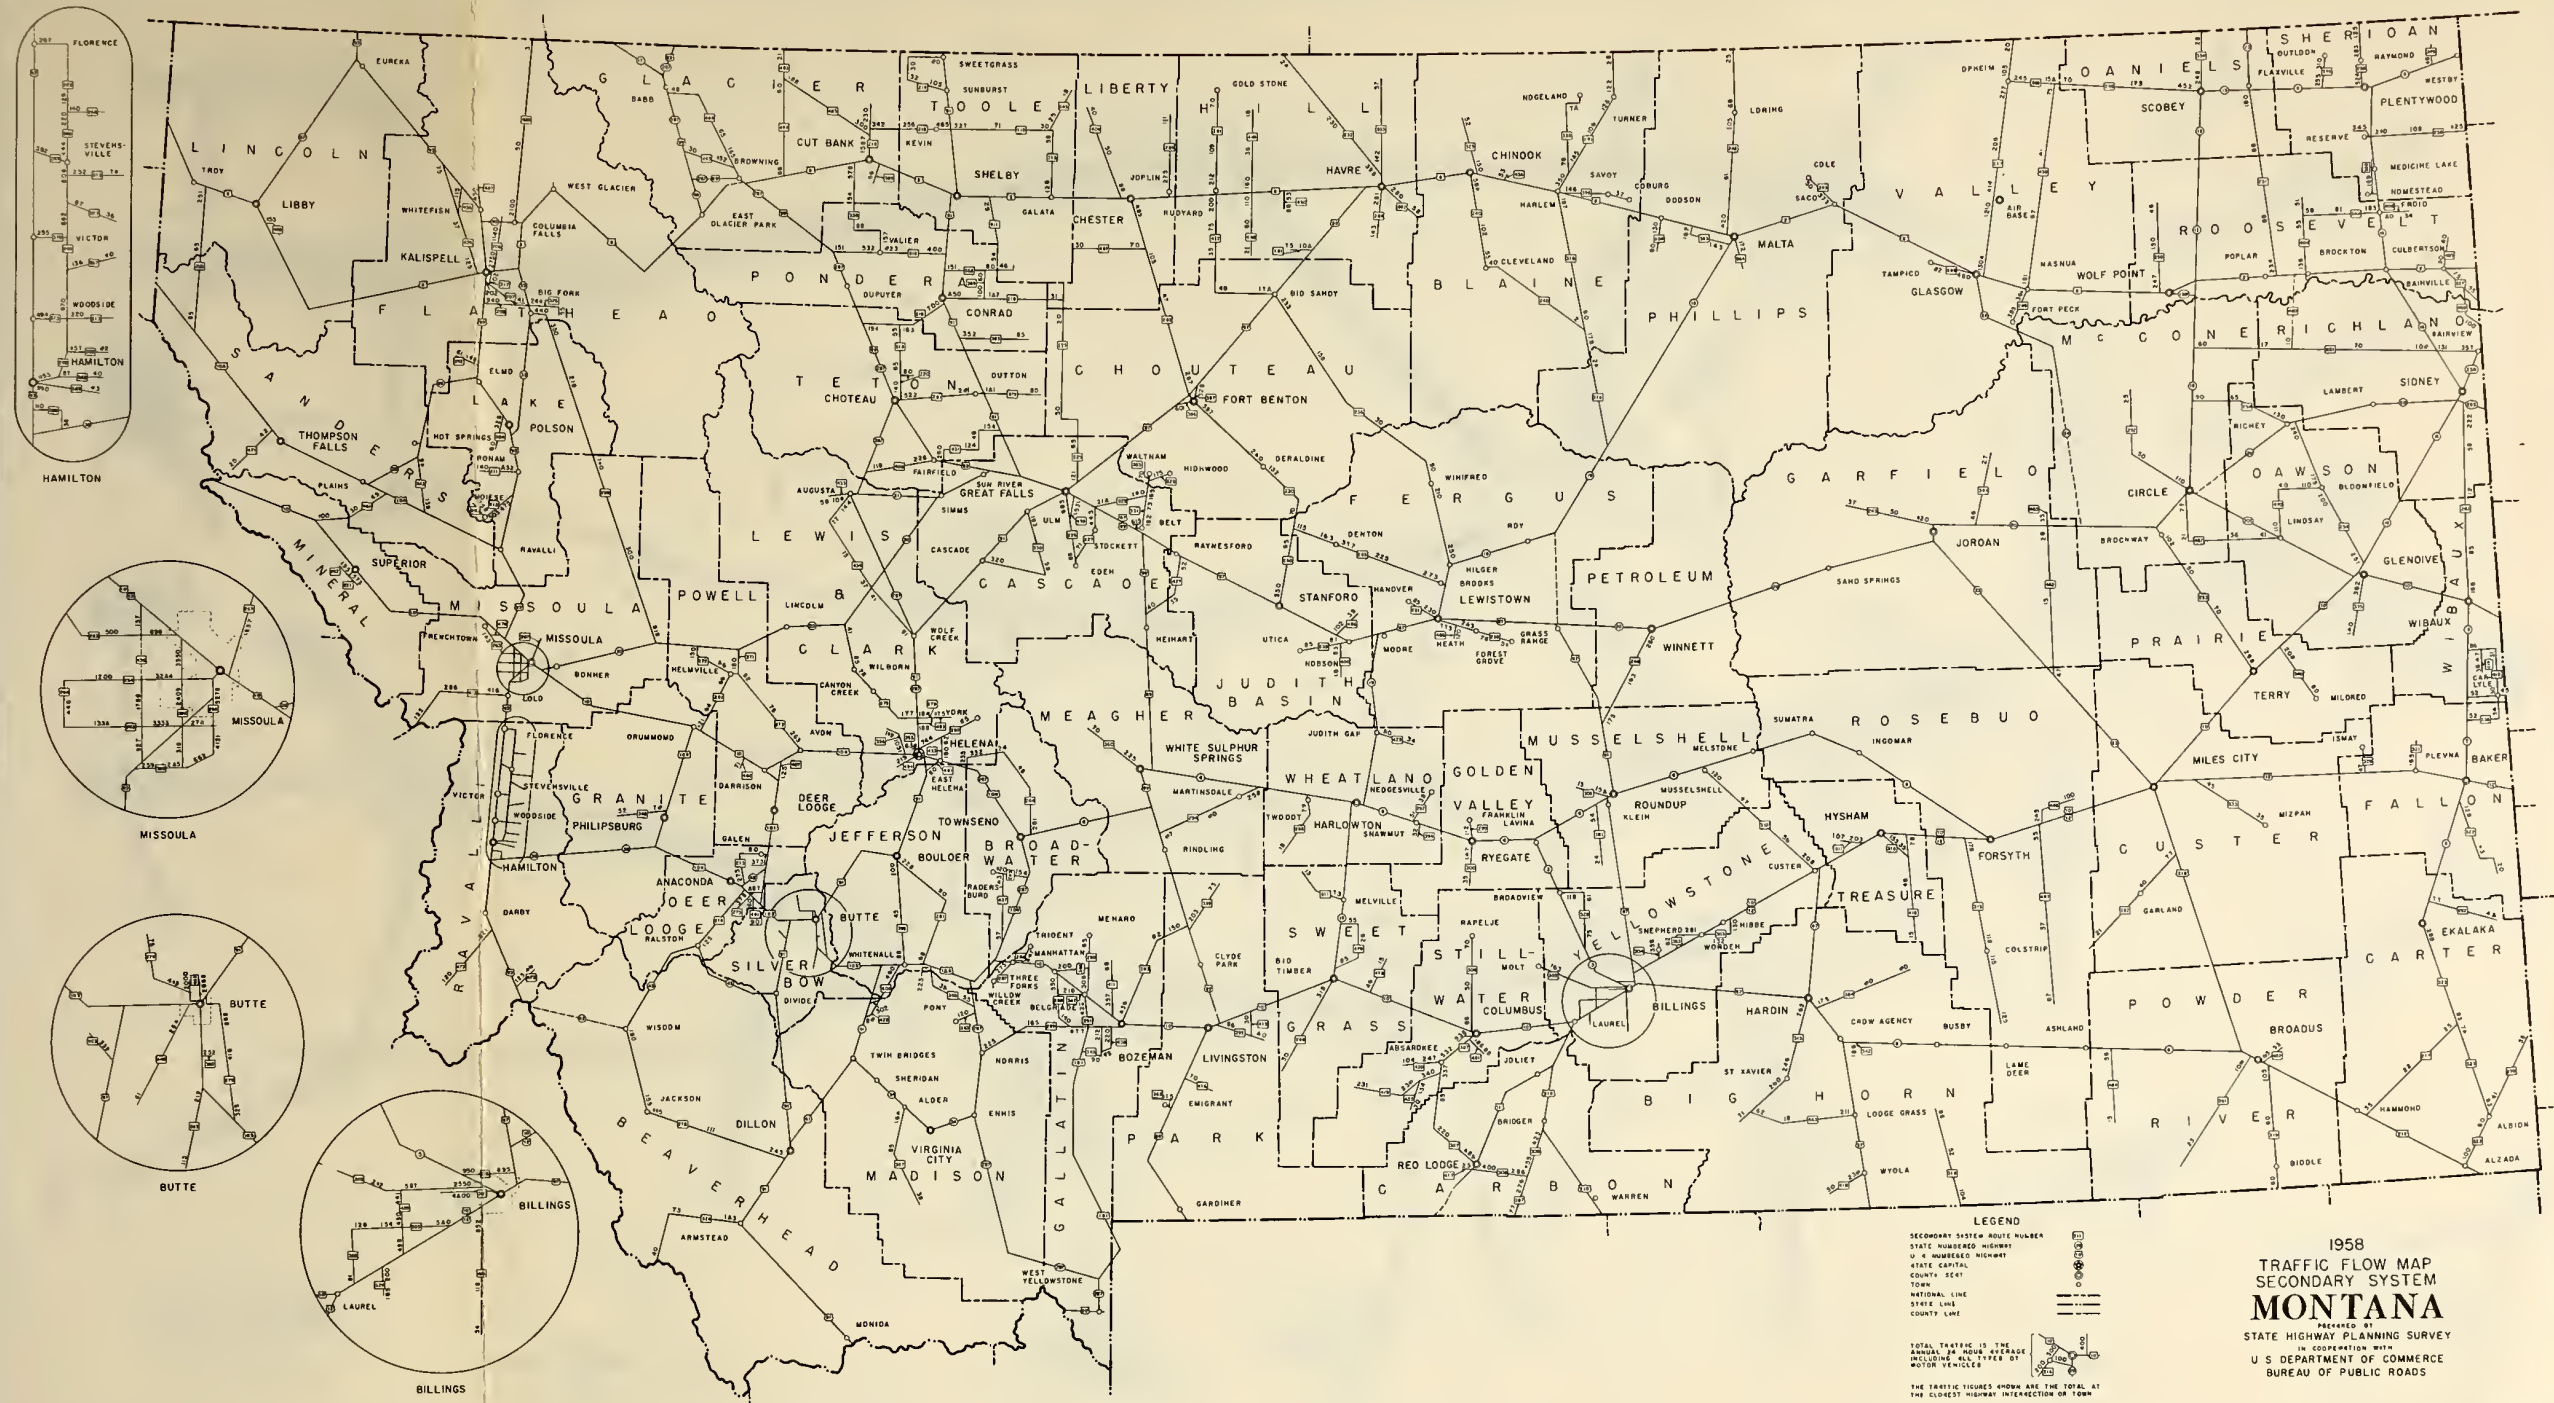

As in previous years this report contains summaries of traffic volumes on the Interstate, Primary and Secondary systems by route and by system. A summary of mileage by traffic volume groups, on each of the three systems, is included this year for the first time.

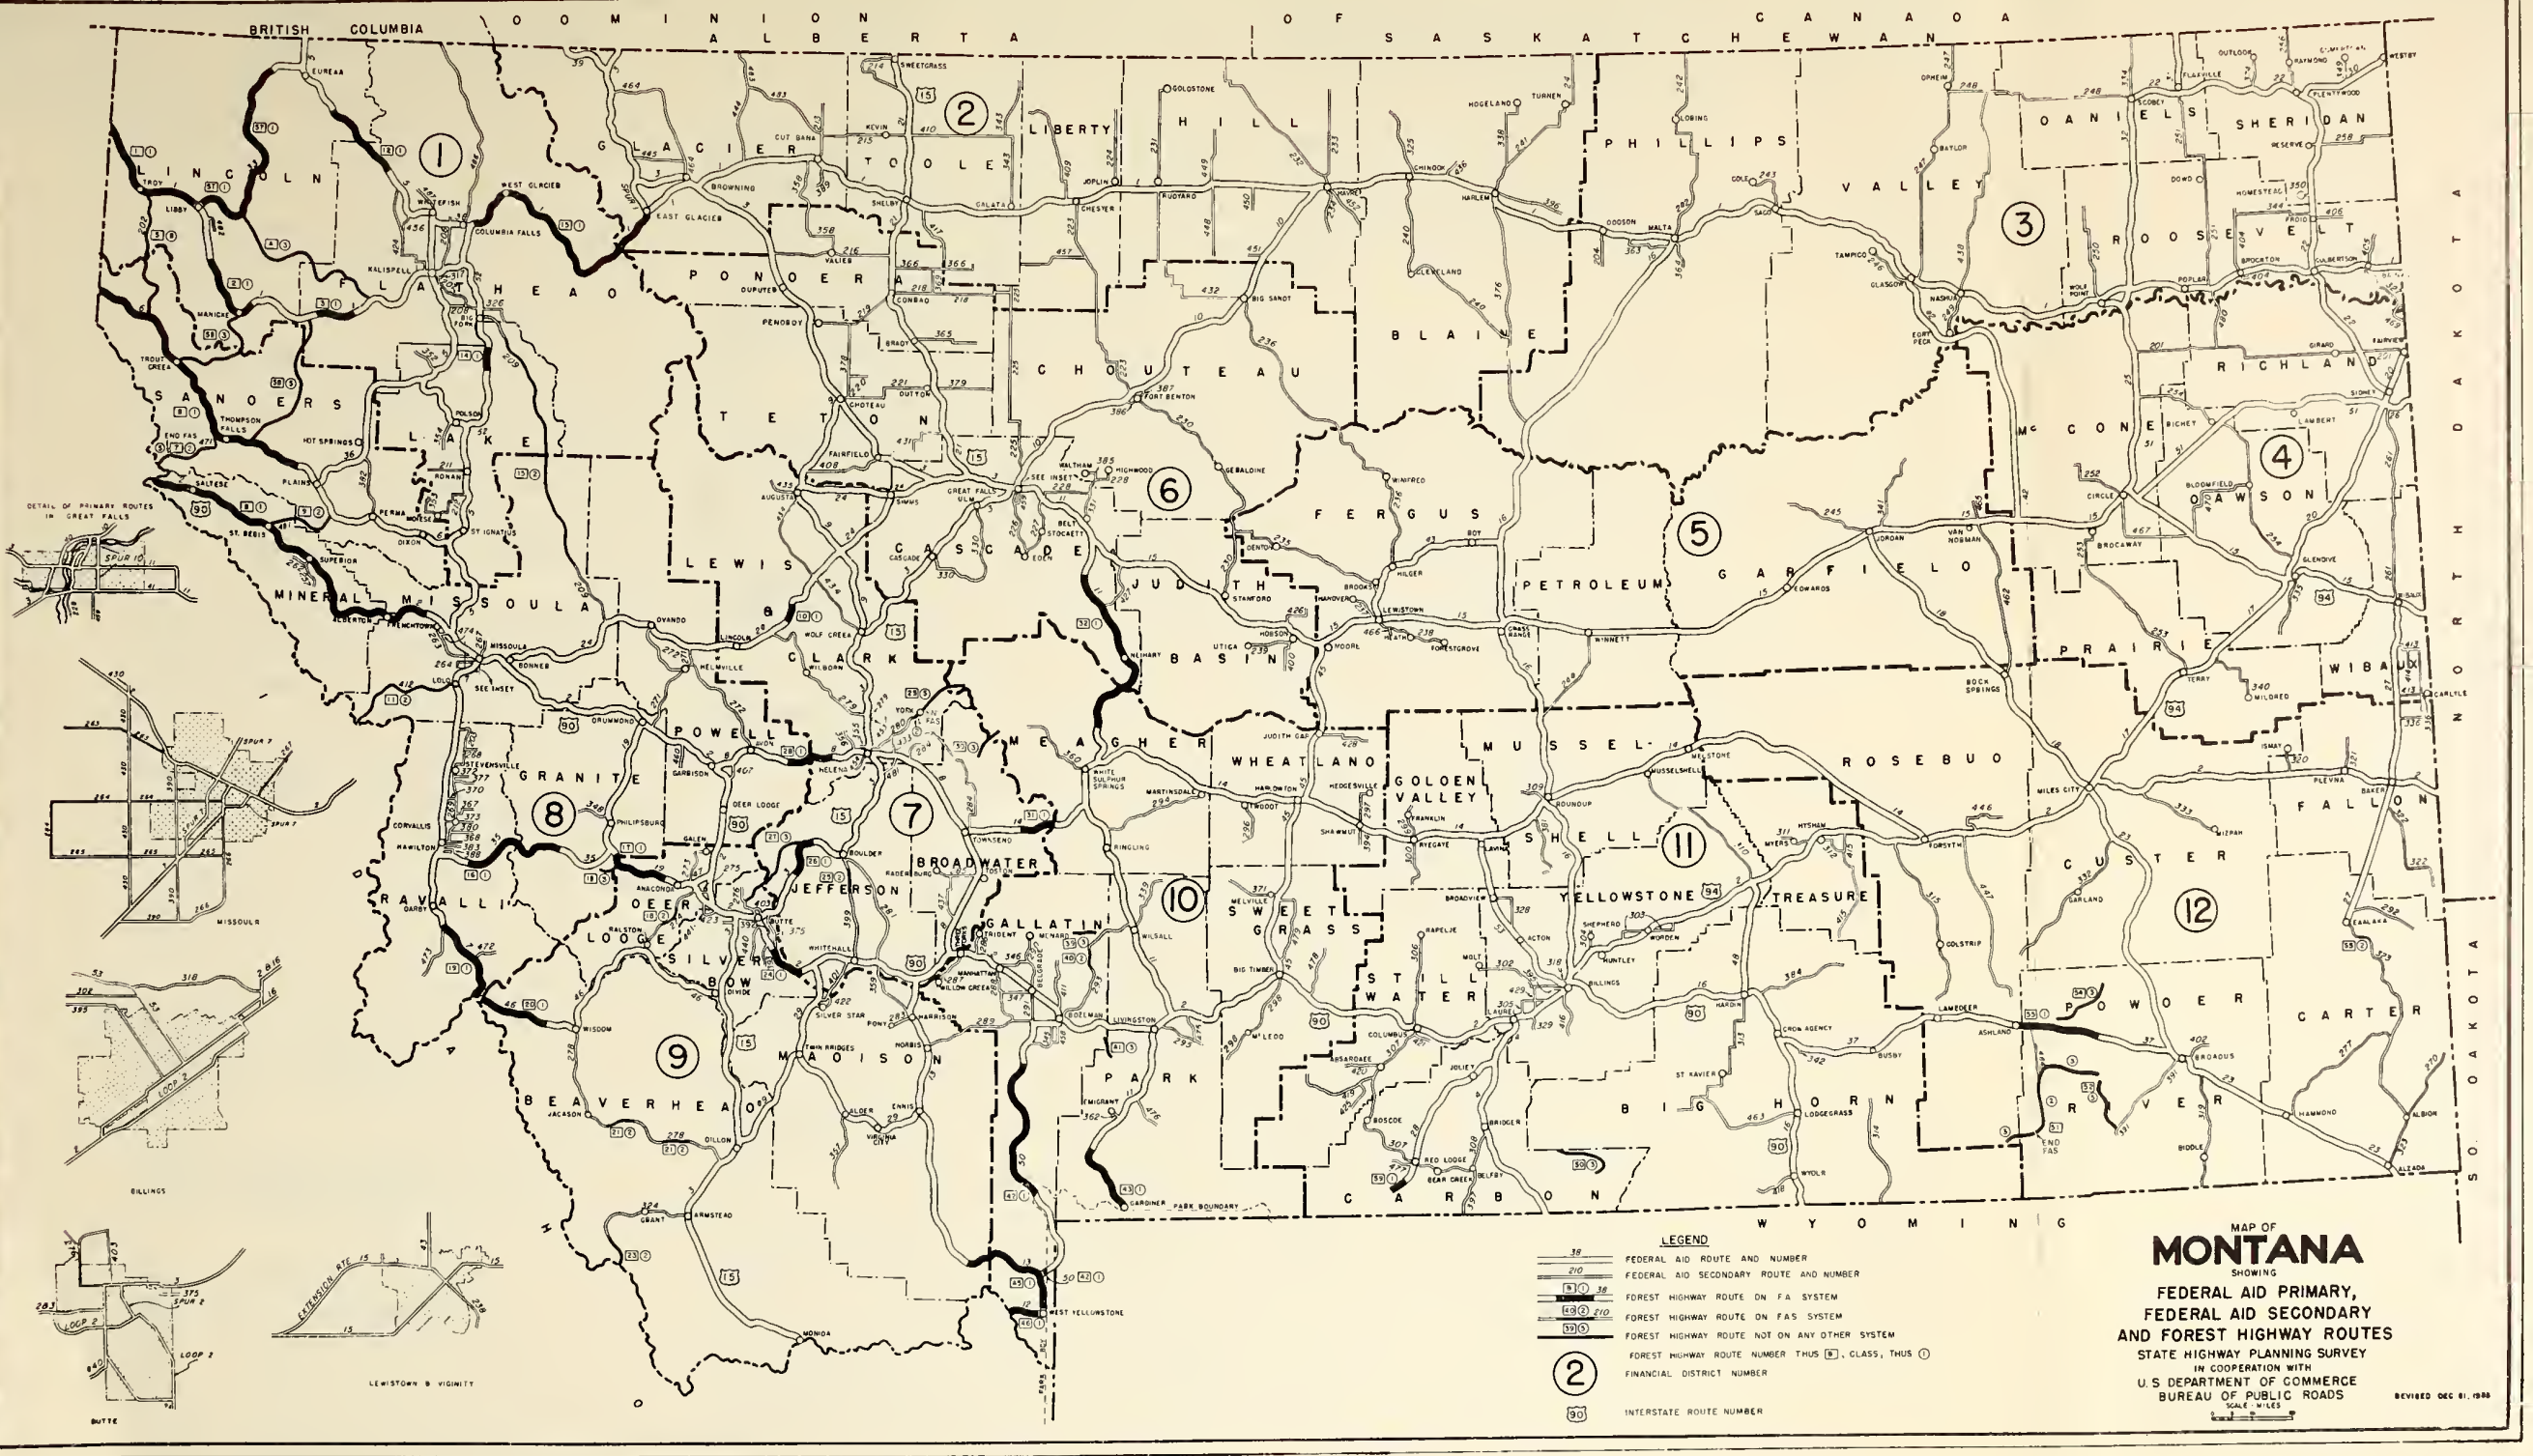

The Traffic by Section Report makes available a large quantity of general traffic information but, more detailed traffic data for specific locations and requirements is available upon request to the Planning Survey division.
